Summary

Senior software engineer with 10+ years building production web applications and backend services. Recent work includes a general ledger microservice, an award-winning GenAI assistant, and independent agent systems with persisted workflows, human approval, and automated verification.

Skills

Core: C#, .NET, JavaScript, Python, SQL, React, Next.js, Node.js

AI systems: LangGraph, Anthropic SDK, Claude Code, OpenAI Codex, tool use, structured outputs, approval workflows

Infrastructure: Convex, Docker, GitHub Actions, AWS, Azure, Coolify, automated testing

Selected AI systems and automation

Eunomia

2025 - Present

Multi-agent research and planning application

- Built an application where six specialist agents research business ideas and return versioned reports and scorecards to the originating conversation.
- Orchestrated human approval, parallel research, and persisted checkpoints with LangGraph and Convex. Idempotent dispatch prevents duplicate jobs during retries.
- Added provenance checks and a structured-output critic that screens research before synthesis.

Next.js, React, Convex, LangGraph, Anthropic SDK, Perplexity, Docker

base-stack

2025 - Present

Shared app template and agent-assisted maintenance

- Built a Next.js and Convex template that distributes shared changes to downstream apps through GitHub Actions pull requests; merge rules protect app-specific code.
- Created a reverse workflow that sends downstream fixes to a Claude agent for implementation in the template, then propagates updates back to dependent apps.

Next.js, Convex, Clerk, GitHub Actions, Vitest, Docker, Coolify

Stonks

2025 - Present

Market-data ingestion and guarded agent backtesting

- Built an options-flow research platform where agents propose strategies for human approval before creation and backtesting; agents write proposal records, while approval creates a strategy and queues its backtest.
- Ingests market-session flow through a WebSocket with a five-minute REST backstop. Python backtests run behind AST checks, subprocess timeouts, and a bounded diagnose-fix-verify loop.

Next.js, Convex, Trigger.dev, Python, Anthropic SDK, Vitest

Open source: Diagnosed a custom-port failure in OpenClaw's clawdock script and submitted a fix merged through a follow-up pull request.

Professional experience

ServiceTitan

Jan 2022 - Apr 2025

Senior Software Engineer | Remote

- Developed and released features for a general ledger microservice as the product moved from beta toward general availability.
- Built a context-aware GenAI assistant with page-specific tools and schema-constrained responses; won first place for "Most Impactful to ServiceTitan" at the May 2023 GenAI Hackathon.

React, C#, .NET, SQL

Gogo

Apr 2020 - Jan 2022

Senior Developer | Broomfield, CO

- Improved team coordination during significant turnover and helped bring a delayed project to release.
- Migrated applications to AWS and modernized interfaces with responsive design.

React, Redux, Backbone.Marionette, Python, AWS

Vendavo

Jun 2018 - Apr 2020

Senior .NET Developer | Denver, CO

- Redesigned and migrated a Silverlight application to React; built an offline mobile proof of concept that synchronized orders when connectivity returned.
- Helped the team move from TFS to Git through training and repository support.

React, Redux, C#, .NET, Ionic

CSG International

Jul 2016 - Jun 2018

Software Developer Engineer Senior | Omaha, NE

Built ordering and CRM features and automated tests; delivered bug fixes and backported patches.

idea5

Dec 2013 - Jul 2016

Full Stack Software Developer | Omaha, NE

- Cut the slowest page's load time from 15-30 seconds to 2-3 seconds by replacing live rendering with thumbnails generated by a microservice.
- Found a template flaw that exposed application connection strings; built services with Docker, Node.js, Elasticsearch, and Azure.

Earlier experience

Nebraska Book Company: .NET Developer, 2012-2013. Built backend services for orders and inventory.

University of Nebraska - Lincoln, UCARE: Research Assistant, 2010-2012. Developed sensor and GSM tracking devices for Sandhill cranes.

Interact Incorporated: Intern, 2009-2010. **Phoenix Web Group:** Developer, 2006-2008.

Education and recognition

B.S. in Computer Engineering, University of Nebraska - Lincoln, 2012.

First place, ServiceTitan GenAI Hackathon, "Most Impactful to ServiceTitan," 2023.
